- Educated at Sejong Academy of Science and Arts and Sogang University

Jiho LEE | CMO

- Head of Marketing
- B.A. Sogang University, M.A. Korea National University of Arts (K-Arts)

Problem

- Consumers hold multiple credit cards for rewards but struggle to maximize benefits and meet spending requirements.
- Most mainstream digital wallets support only one card per transaction, limiting payment flexibility.
- Group payments still rely on one person paying upfront and collecting transfers, leaving card rewards concentrated with a single payer.

Solution

- CandyPay lets consumers split a single purchase across multiple credit cards or split bills through direct individual payments.
- In Korea, merchants can accept QR and remote payments without dedicated terminals, while platforms can integrate CandyPay through SDKs.
- Our proven Korean payment technology is designed to integrate with existing global payment infrastructure and digital wallets.

Key Features

- **Patent-backed Multi-Card Payments & Split Billing:** Concurrent multi-card authorizations with one authentication, plus direct payments by individual participants.
- **Zero-Friction Merchant Integration:** Out-of-the-box support for remote payments, table QR ordering, and lightweight developer-friendly SDKs.
- **CandyPayAI Engine:** AI-driven card benefit optimization, evolving from personalized recommendations to automated multi-card payment execution.

Business Model

- **Korean Market:** Merchant transaction fees from multi-card payments, QR ordering, and remote payments.
- **Global Expansion (Planned):** Fixed or percentage-based fees per transaction through API/SDK partnerships with payment providers.
- **Future Expansion:** Data-driven merchant analytics, personalized promotions, and commerce advertising solutions.

Business Snapshot

- **Market Traction:** Launched in August 2024; KRW 890M (USD 660K)+ cumulative TPV, 4,500 users, and 180+ merchant locations. 2026 YTD transaction volume reached KRW 630M by September, already 3.0x FY2025.
- **Funding & R&D:** KRW 400M (USD 300K) seed funding from Seoul National University Technology Holdings and other investors; selected for Korea's TIPS Program.
- **Global Recognition:** Top 10 startup in Google Play's ChangGoo Program (2024); K-Global Seoul Nat'l Univ. Unicorn 3rd cohort.
- **Awards & Recognition:** FSC Fintech Idea Competition Excellence Award (2022); Innovation IT Award, Fintech Category (2026); product demonstration to the FSC Chairman (2025).

Seeking Opportunities

- **Global PoC Partnerships**:Joint PoCs with Southeast Asian payment providers and digital wallets to enable multi-card checkout and increase card usage.
- **Platform Collaboration**: Licensing split-payment and group bill settlement SDKs to commerce, O2O, and financial platforms.
- **Strategic Pre-Series A Investment**: Engaging institutional investors for Pre-A round to accelerate international market expansion.
