- Korea University, Department of Electronics and Information Engineering

Seung-hwan Yoo | Executive Director, Business Planning

- 10 years at Korea Enterprise Data (now KODATA) and Korea Credit Bureau (KCB)
- Leads service UI/UX planning; Seoul National University (Agricultural Economics)

HomeQ app · HomeQ AI Agent · KakaoBank jeonse service powered by BigTech Plus

Problem

- Real estate makes up about 76% of Korean household assets, yet its data is scattered across public registers, ledgers, and price sources.
- Lenders still verify property rights and values manually from official documents, slowing non-face-to-face loans and raising risk.
- Tenants face rising rental deposit (jeonse) fraud with no easy way to check a property's legal and financial safety before signing.

Solution

- DocQ: a SaaS platform for real-time viewing, analysis, and sharing of official real estate registers, ledgers, and cadastral maps.
- Data & API: R-Code address standardization, R-List owned-property lookup, and market price APIs plugged directly into bank apps.
- HomeQ: a consumer app for home recommendations, deposit safety diagnosis, and asset management across the entire lease lifecycle.

Key Features

- Register rights analysis, including canceled entries (unique in Korea), automating collateral checks through RPA and APIs.
- Owner-based property database built from 10M+ annual register and ledger inquiries, enabling instant ownership verification.
- Real-time alerts on register, price, and transaction changes; 6 registered and 7 pending patents incl. rights analysis and AVM.

Business Model

- B2B SaaS and usage-based fees for DocQ register viewing and analysis, our profitable core revenue base.
- Data and API licensing to banks, insurers, and platforms such as KB Kookmin Bank, KakaoBank, Woori Bank, and NAVER.
- B2C MyData monetization via HomeQ: brokerage and referral fees for mortgages, jeonse loans, and credit cards.

Business Snapshot

- Founded in 2019 in Seoul after winning the FSC's 1st Korea Fintech Idea Contest; 29 employees, 70%+ developers.
- 2025 revenue KRW 7.77B (approx. USD 5.5M); net income turned positive in H1 2026; 2026 revenue target KRW 12.0B.
- Series A of KRW 5.7B (Q3 2025) from Korea Investment Partners, KakaoBank, HG Initiative, and Korea Credit Information.
- Live with KB Kookmin, KakaoBank, NH, Hana, Woori, Shinhan, BNK, IBK Securities, Kyobo Life, and NAVER.
- Selected by every major Korean financial group's fintech lab; FSC Regulatory Sandbox; ISO/IEC 27001 certified.

Seeking Opportunities

- Banks, lenders, and insurers in Singapore and Southeast Asia for PoCs in property data, collateral verification, and digital lending.
- Proptech and real estate platforms seeking property data infrastructure, address standardization, and rental risk diagnosis.
- Strategic investors and regional data partners for joint go-to-market and overseas expansion.
