Team

Sukhyun KO | CEO

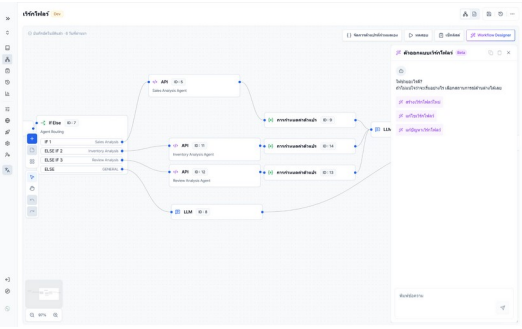

- Former Co-founder of Company.AI, acquired by NAVER
- Former AI SaaS lead at NAVER; Cloud infrastructure lead at Toss

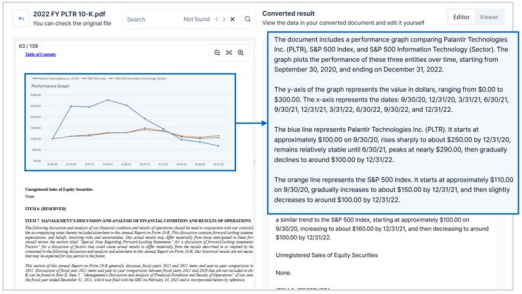

Woomyeong PARK | CDO / Head of Research

- Ph.D., University of Maryland, College Park
- Former HyperCLOVA LLM(Korea's Largest Sovereign AI Project) research lead at NAVER; Samsung R&D engineer

Sihyeung HAN | CSO / Head of Business Development

- Former AI business lead at NAVER Clova and NAVER Cloud
- Former IBM digital strategy and AI consultant

Problem

- Enterprise teams manually reconcile scattered documents and regulations, slowing reviews, reporting, and customer service.
- Fragmented AI tools require repeated custom development, making new use cases costly and difficult to scale.
- Enterprises need traceable answers and secure deployments; general-purpose AI alone lacks the required operational controls.

Solution

- **STORM** unifies data gathering, document processing, agent building, deployment, and governance in one no-code enterprise AI platform.
- Business teams create **agents** for any types of use cases including knowledge search, document review, and reporting without relying on repeated custom builds.
- Deploy on-premises, in private clouds, or through SaaS to match enterprise security and operational requirements.

Key Features

- **STORM Act** designs, tests, and deploys AI agents from natural-language requests, reducing technical barriers for business users.
- **Agentic Parsing** preserves document structure and context, transforming complex financial documents into AI-ready data. The engine is backed by proprietary models ranked #1 globally on MTEB and MDP Bench.
- **Agentic RAG** connects information across documents to provide source-grounded answers and flag relevant exceptions or risks.

Business Model

- Enterprise software licenses for on-premises and private-cloud deployments, with optional annual maintenance.
- Tiered SaaS subscriptions for cloud-based access to STORM Platform.
- Partner-led sales and implementation through local system integrators, distributors, and resellers.

Business Snapshot

- Founded in 2023, headquartered in Seoul; Japan subsidiary established in 2025.
- Enterprise references include IBK, Samsung Life, and Korea Credit Guarantee Fund.
- Four official partnerships and five-plus partner-led contracts in Japan within the first year.
- Delivered a private-cloud AI platform and travel agent for Siam AI in Thailand.
- Platform interfaces available in Korean, English, Japanese, and Thai.

Seeking Opportunities

- **Enterprises for PoCs** in various custom AI Agent use cases powered by AI-ready knowledge base and AI Agent Builder platform.
- Singapore-based partners including **system integrators and resellers** for joint sales, implementation, and enterprise delivery.
- **Regional model and infrastructure providers** for joint solutions and go-to-market partnerships across Southeast Asia.
